## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group IV, Claims 7-11, in Paper No. 7 filed 8-5-02, is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. Claims 1-6 and 12-18 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 7-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 7-11 are indefinite because they depend from non-elected claim 4.

### ***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1644

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

7. Claims 7-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Altman et al. (Science (1996) 274:94-96).

Altman et al teach a polynucleotide comprising a nucleotide sequence encoding a fusion polypeptide comprising a T cell antigen presenting domain (HLA-A2) fused to an oligomerization domain (a 15 amino acid substrate peptide for BirA dependent biotinylation). Oligomerization into tetramers was achieved by mixing avidin with the biotinylated fusion polypeptides. Altman et al also teach a gene delivery vehicle and a host cell comprising said nucleotide. Claim 10 is included in the rejection since the host cell comprising said nucleotide expresses the fusion protein encoded by said nucleotide. (See entire article, especially page 94, column 2 and Footnotes 10-12). Therefore, the referenced teachings anticipate the claimed invention.

8. Claims 7-11 are rejected under 35 U.S.C. 102(a) and/or (e) as being anticipated by Schneck et al. US Patent 6,015,884.

'884 teaches a polynucleotide comprising a nucleotide sequence encoding a fusion polypeptide comprising a T cell antigen presenting domain (NHC Class II fused to peptide antigen) fused to an oligomerization domain (immunoglobulin heavy and light chains), a gene delivery vehicle and a host cell comprising said nucleotide. Claim 10 is included in the rejection since the host cell comprising said nucleotide expresses the fusion protein encoded by said nucleotide. (See entire patent, especially Figure 1C, column 5, lines 42-61 and Column 19, lines 20-60 and Example 1). Therefore, the referenced teachings anticipate the claimed invention.
